Dialect: *Κοινή τεχνική* [Technical Koine](#)
Domain: *Ἐπιστήμη* [Science](#)
Format: *Πραγματεία* [Treatise](#)

Alchemist I is a modern scholarly designation for an anonymous compiler active within the Greek alchemical corpus from the 3rd to the 7th centuries CE. This period of Greco-Egyptian and Byzantine alchemy was centered in Alexandria and the Eastern Roman Empire, where Hellenistic scientific traditions merged with Egyptian craft practices. Texts from this era were often pseudepigraphically attributed to legendary figures such as Hermes Trismegistus.

The corpus attributed to this designation consists of numerous technical treatises. These works, preserved in manuscripts like Marcianus graecus 299, include detailed laboratory procedures, recipes for creating alloys and dyes, and theoretical discussions on the nature of matter. They form part of larger anonymous collections, including the *Physika kai Mystika* and the works attributed to Christianos the Philosopher.

This anonymous tradition was essential for transmitting chemical knowledge and experimental techniques from antiquity to the Islamic and medieval Latin worlds. The texts provide crucial evidence for early laboratory practices, the development of apparatus, and philosophical theories concerning material transformation. They represent a significant intersection of technology, philosophy, and mystical thought.
