Format: [Πραγματεία](#) [Treatise](#)

Galen was a Greek physician and philosopher who lived during the Roman Empire in the 2nd and 3rd centuries CE. He was born in the city of Pergamon in 129 CE. After a broad education in philosophy, he studied medicine across the eastern Mediterranean, including at the famous center in Alexandria. He served as a doctor for gladiators in Pergamon before moving to Rome, where he became a celebrated physician and eventually served as a court doctor to several Roman emperors. He died in Rome around the year 216 CE, though the exact date is uncertain.

Galen was an exceptionally prolific writer who produced works on medicine, anatomy, and philosophy. He sought to create a unified medical system by combining the practical tradition of Hippocrates with ideas from philosophers like Plato and Aristotle. His major surviving works include detailed studies on anatomy, the functions of the body, and methods of treatment. A significant amount of his writing was lost over time, but much of what survives comes to us through later translations into Arabic and Latin.

According to modern scholars, Galen's historical importance is immense. His synthesized theories, including the system of the four humors and a teleological view of the body's design, became the foundation of medical science in Europe and the Islamic world for more than a thousand years. His anatomical descriptions, though based primarily on animal dissections and containing errors, were considered authoritative until the Renaissance. His vast body of work ensured his influence persisted through the Middle Ages and fundamentally shaped the history of medicine and biology.

Works (110)

- [Συμβουλή πρὸς παιδὶ ἐπιληπτικῷ](#) · [Advice for an Epileptic Boy](#) · 22 passages
- [Κατὰ Λύκου](#) · [Against Lycus](#) · 50 passages
- [Κατὰ τῶν γράψαντων περὶ τύπων ἢ κύκλων](#) · [Against Those Who Wrote-Types or Circuits](#) · 36 passages
